1	Installation and dependencies:	3
2	Main authors:	5
3	License:	7
4	Testing and verification:	9
5	Contributions:	11
6	Documentation:	13
6.1	Examples and demos:	13
6.2	API documentation:	13
7	Indices and tables	15

cbcbeat is a Python-based software collection targeting computational cardiac electrophysiology problems. cbcbeat contains solvers of varying complexity and performance for the classical monodomain and bidomain equations coupled with cardiac cell models. The cbcbeat solvers are based on algorithms described in Sundnes et al (2006) and the core FEniCS Project software (Logg et al, 2012). All cbcbeat solvers allow for automated derivation and computation of adjoint and tangent linear solutions, functional derivatives and Hessians via the dolfin-adjoint software (Farrell et al, 2013). The computation of functional derivatives in turn allows for automated and efficient solution of optimization problems such as those encountered in data assimilation or other inverse problems.

cbcbeat is based on the finite element functionality provided by the FEniCS Project software, the automated derivation and computation of adjoints offered by the dolfin-adjoint software and cardiac cell models from the CellML repository.

cbcbeat originates from the [Center for Biomedical Computing](#), a Norwegian Centre of Excellence, hosted by [Simula Research Laboratory](#), Oslo, Norway.

CHAPTER 1

Installation and dependencies:

The cbcbeat source code is hosted on Bitbucket:

<https://bitbucket.org/meg/cbcbeat>

The cbcbeat solvers are based on the [FEniCS Project](#) finite element library and its extension [dolfin-adjoint](#). Any type of build of FEniCS and dolfin-adjoint should work, but cbcbeat has mainly been developed using native source builds and is mainly tested via Docker images.

See the separate file `INSTALL` in the root directory of the cbcbeat source for a complete list of dependencies and installation instructions.

CHAPTER 2

Main authors:

See the separate file `AUTHORS` in the root directory of the `cbcbeat` source for the list of authors and contributors.

CHAPTER 3

License:

cbcbeat is free software: you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

cbcbeat is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with cbcbeat. If not, see <<http://www.gnu.org/licenses/>>.

CHAPTER 4

Testing and verification:

The cbcbeat test suite is based on [pytest](#) and available in the `test/` directory of the cbcbeat source. See the `INSTALL` file in the root directory of the cbcbeat source for how to run the tests.

cbcbeat uses Bitbucket Pipelines for automated and continuous testing, see the current test status of cbcbeat here:

<https://bitbucket.org/meg/cbcbeat/addon/pipelines/home>

CHAPTER 5

Contributions:

Contributions to cbcbat are very welcome. If you are interested in improving or extending the software please [contact us](#) via the issues or pull requests on Bitbucket. Similarly, please [report](#) issues via Bitbucket.

Documentation:

The cbcbeat solvers are based on the Python interface of the [FEniCS Project](#) finite element library and its extension [dolfin-adjoint](#). We recommend users of cbcbeat to first familiarize with these libraries. The [FEniCS tutorial](#) and the [dolfin-adjoint documentation](#) are good starting points for new users.

6.1 Examples and demos:

A collection of examples on how to use cbcbeat is available in the `demo/` directory of the cbcbeat source. We also recommend looking at the test suite for examples of how to use the cbcbeat solvers.

6.2 API documentation:

6.2.1 cbcbeat package

Subpackages

`cbcbeat.cellmodels` package

Submodules

`cbcbeat.cellmodels.beeler_reuter_1977` module

`cbcbeat.cellmodels.cardiaccellmodel` module

`cbcbeat.cellmodels.fenton_karma_1998_BR_altered` module

`cbcbeat.cellmodels.fenton_karma_1998_MLR1_altered` module

cbcbeat.cellmodels.fitzhughnagumo module

cbcbeat.cellmodels.fitzhughnagumo_manual module

cbcbeat.cellmodels.grandi_pasqualini_bers_2010 module

cbcbeat.cellmodels.nocellmodel module

cbcbeat.cellmodels.rogers_mcculloch_manual module

cbcbeat.cellmodels.tentusscher_2004_mcell module

cbcbeat.cellmodels.tentusscher_2004_mcell_cont module

cbcbeat.cellmodels.tentusscher_2004_mcell_disc module

cbcbeat.cellmodels.tentusscher_panfilov_2006_M_cell module

cbcbeat.cellmodels.tentusscher_panfilov_2006_epi_cell module

Module contents

Submodules

cbcbeat.bidomainsolver module

cbcbeat.cardiacmodels module

cbcbeat.cellsolver module

cbcbeat.dolfinimport module

cbcbeat.gossplittingsolver module

cbcbeat.gotran2cellmodel module

cbcbeat.gotran2dolfin module

cbcbeat.markerwisefield module

cbcbeat.monodomainsolver module

cbcbeat.splittingsolver module

cbcbeat.utils module

Module contents

CHAPTER 7

Indices and tables

- `genindex`
- `modindex`
- `search`
